WORK

SmartHead s. r. o. 2025 - 2025 | B2B

analysis and development of reporting platform

Angular ▪ RxJs ▪ Apache Echarts ▪ SVG ▪ ngZorro ▪ Sass ▪ Jest ▪ GitHub ▪
Storybook
▪ Spectator ▪ Atlasian BB+C+J

SuperScale s. r. o. 2023 - 2025

analysis and development of internal portal & data visualization library

Angular ▪ RxJs ▪ D3.js ▪ SVG ▪ primeNg ▪ Sass ▪ Jest ▪ Spectator ▪ GitHub ▪
Storybook ▪ Atlasian Confluence+Jira

ERNI (Slovakia) s.r.o. 2019 - 2022 32h part-time

analysis and development of Web-Apps, UI design

Angular ▪ Angular Material ▪ RxJs ▪ D3.js ▪ Sass ▪ Spectator ▪ Storybook ▪
Atlasian BitBucket+Confluence+Jira

Slovak National Gallery 2019 - 2020 8h+ part-time

development of webumenia.sk and occasional micropages

VueJS ▪ NuxtJS ▪ Laravel ▪ PHPUnit ▪ JIRA ▪ Confluence ▪ Git

...older positions are in my [online portfolio](#)

EDUCATION

Faculty of Mathematics, Physics and Informatics

Comenius University Bratislava

2008 - 2010: Mathematics - Computer Graphics and Geometry (Mgr.)

2005 - 2008: Applied Informatics (Bc.)

HTML / CSS / JS

Angular

Angular Material

primeNg

D3.js

SVG

Less / SASS

RxJs

TypeScript

Svelte + SvelteKit

VueJS + NuxtJS

Java

SQL

Python

Jira + Confluence

Git / BitBucket

Testing

LANGUAGES

Data visualization examples

SuperScale - XY chart - Component to render (& mix render) standard line chart, grouped (or stacked) bar chart, scatterplot and an area chart

#30DayChartChallenge 2023 - interactive map of world population & prognosis

#30DayChartChallenge 2023 - map of sea wave height & wind direction aligned to lunar calendar

#30DayChartChallenge 2023 - chart displaying the oldest known living people with added comparison to national population statistics

Projects:

SuperScale (Slovakia) s.r.o.

All in one ELT platform for data management & custom dashboards

- manage custom pipelines in order to aggregate & transform data from various resources
- build custom visualization components
- build interactive dashboards within web platform

ERNI (Slovakia) s.r.o.

1) User friendly GUI for laboratory device(spectrometer), which:

- allows easy management of experiments to be executed
- allows and visualizes automation over the set of samples
- elements are bound to user management provided by KeyCloak instance

Target: web application written in Angular running in Electron

Role: Angular developer (development / basic testing / bug fixing), UI design, icon design

Specially proud of: ring-pie-chart to provide quick insights on executed experiments for each sample

2) User friendly GUI for a spectrometer, similar to (1) plus extra features:

- D3.js custom made chart component (to meet overall look & feel and to provide features from older product version)
- Experiment results export (2 charts + table + custom template) done solely on the frontend

Target: web application written in Angular running in Electron

Role: Angular developer (development / basic testing / bug fixing), UI design, icon design

Specially proud of: charting and printing

3) Similar to (1) but:

- dynamic GUI (similar to (1)), but based on backend definitions
- components library (as a side-project), so all client projects can share Look & Feel in a proper manner

Target build: web application written in Angular running in Electron

Role: FE lead, analysis and development, icon designs

Specially proud of: finally creating a component library which was also used by another project team

AI Maps s.r.o.

1) Car-park management system:

- Track position of cars
- Track expenses
- Schedule rides & car service

Target: web application

Role: angular developer

2) Car rides management system:

- Schedule regular rides
- Manage drivers (rides / holidays)

Bonum s.r.o.

Development of custom Manufacturing Execution Systems for automotive:

- Collects & store real time data from assembly line
- Develop custom real-time monitoring systems
- Custom reporting

Target: web application, PDF reports

Role: full stack developer, customer support, design and automation of report generation

Specially proud of: improved design of few reports, tiny utilities to speed up new car model mapping
