Frontend Developer

Úzka 3, 93534 Veľký Ďur

<https://martin-havala.github.io/martin>

Hi! I am senior software developer currently focused on web applications / front-end. With over a decade of experience in the software development I got what's and why's of well maintainable codebases, yet I'm still flexible enough to question and improve any knowledge & tech which is changing faster than me. Love for design and UX had brought me to front-end side of the spectrum, I'm also passionate about custom data visualization which go beyond basic charts. I'm experimenting with agentic AI development at the moment, yet still loving the craft of making software all alone.

Skills

Frontend	years of experience	Work administration	
HTML / CSS / JS	10+	Jira + Confluence	7
Angular	7	Git / BitBucket	7
TypeScript	7		
RxJs	6	Datavis	
Angular Material	5	SVG	8
Less / SASS	9	D3.js	4
Testing (Karma / Jest)	7	Leaflet	2
primeNg	2		
ngZorro	1	Backend	
		JAVA	4
Svelte + SvelteKit	3	SQL	6
VueJS	2	Python	2
		MongoDB	1

Work in a nutshell

SmartHead s. r. o. 2025 -2026 B2B	analysis and development of ESG reporting platform
SuperScale s. r. o. 2023 - 2025	analysis and development of internal portal & charting library
ERNI (Slovakia) s.r.o. 2019 - 2022	analysis and development of Web-Apps, UI design
Slovak National Gallery 2019 - 2020	development of webumenia.sk and occasional micro pages
AI Maps s.r.o. 2016 - 2018	analysis and development of web-apps, UX analysis

...older positions and personal projects are present in my [online portfolio](#)

Languages

English - C1 Slovak - C2

Education

2008 - 2010: Mathematics - Computer Graphics and Geometry (**Mgr.**); Comenius University Bratislava
2005 - 2008: Applied Informatics (**Bc.**); Comenius University Bratislava

Work

SmartHead s.r.o. | Angular Developer

- I have built and extended reporting features for an ESG reporting platform, including charts, PDF export, DOCX export, and XLS import/export, thus increased attractiveness of the platform for users
- Refactored nested ReactiveForms using signals and improved data model/interface design to simplify bindings and reduce bugs, which lead to easier development of new features
- Delivered frontend-only functionality for report generation and data handling within the Angular application, thus reducing BE workload and resources usage.

SuperScale (Slovakia) s.r.o. | Front-End / Angular Developer

- Developed an internal portal and custom charting library based on *D3.js* for an ELT platform used for data management and dashboards, making enjoyable spot-on visualizations meeting the platform look and feel.
- Built several interactive dashboard components and custom visualizations for pipeline and data transformation workflows for easy, extendable, custom reporting.
- Worked on frontend features supporting custom pipelines and data aggregation across multiple sources.

ERNI (Slovakia) s.r.o. | Angular Developer / UI Designer

- Built Angular-based web application for a laboratory device management running in an *Electron* environment.
- Developed custom visualizations, including a ring-pie chart and a *D3.js* chart component, to match product look and feel.
- Created dynamic form components, experiment result export flows, and an internal components library for reuse across client projects, thus speeding up of development across several client teams.

Slovak National Gallery | Web Developer

- I've improved search and implemented several custom *VueJS* components on webumenia.sk
- I've significantly contributed to 1989.sng.sk, especially with styling & custom components

AI Maps s.r.o. | Angular Developer

- Developed web application features for car-park and ride-management systems.
- Supported scheduling, tracking, and management workflows for drivers, rides, expenses, and service activities.
- Contributed to multiple Angular-based application modules across two related systems.

Bonum s.r.o. | Full Stack Developer

- Built web applications and reporting features for manufacturing execution systems used in automotive contexts.
- Supported real-time monitoring, data collection from assembly lines, and custom reporting workflows.
- Improved report design and created utilities to speed up new car model mapping.
